

Scutellinia trechispora with colorless hairs (or white hairs ?)

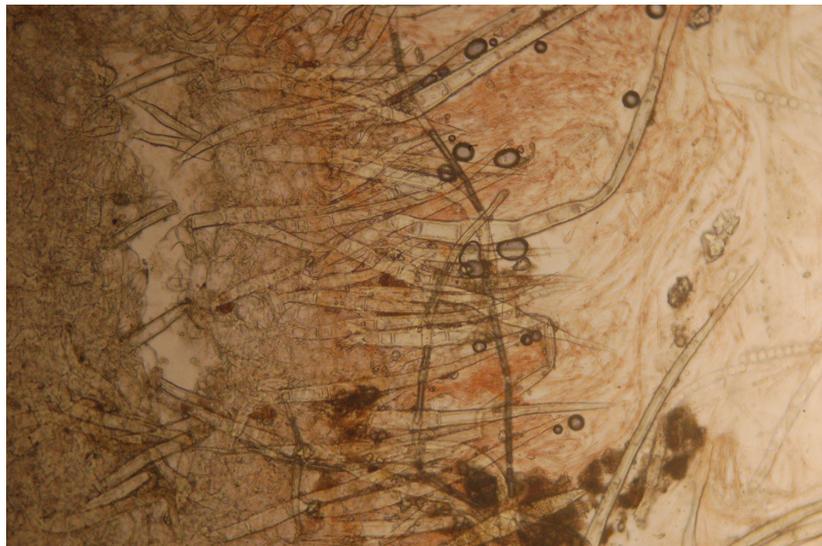

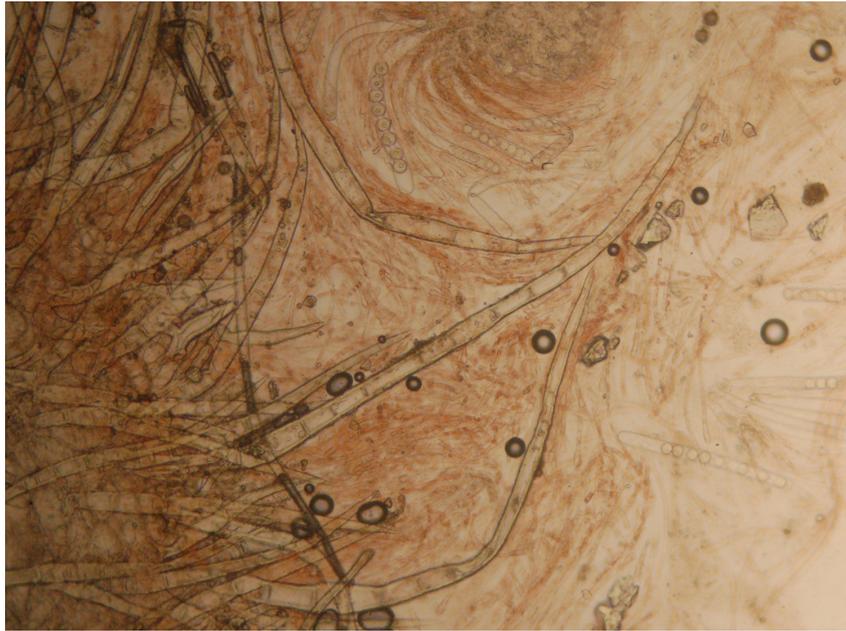

On the side of a pre-mountain river (500 m alt.). On the mossy soil.
We see already the color of white hairs on apotheci:

Moreover, on the ground, I thought, that one, it is special ...
The spore, to confirm *S. trechispora* (x 15,5-17 μm) :

And hairs, totally colorless or white in my mind :

Very curious, isn't it ?
