

# British Dermateaceae: 5. Index to species names

MARIJKE M. NAUTA<sup>1</sup> & BRIAN SPOONER<sup>2</sup>

<sup>1</sup>National Herbarium of the Netherlands, University Leiden branch, P.O. Box 9514, 2300 RA Leiden, The Netherlands

<sup>2</sup>Herbarium, Royal Botanic Gardens, Kew, Richmond, Surrey TW9 3AE, UK

The final part of a synopsis of British Dermateaceae (Leotiales) presents a list of the epithets of all species and synonyms recognised in the previous parts.

This is the final part of a synopsis of British Dermateaceae and provides a list of the epithets with their appropriate disposition for all species and synonyms recognised in earlier parts (Nauta & Spooner 1999a,b,c, 2000a,b; Spooner & Nauta, 1999). All genera and species reported from Britain are included in this synopsis with the exception of *Mollisia* and *Pyrenopeziza*. Generic

descriptions and preliminary lists of accepted taxa for these two genera will be provided separately.

In the following list recognised species appear in bold, whereas non-bold entries refer to synonyms and other names. For species which are considered to require redispotion their appropriate genus is indicated.
